

NORTH AMERICA. LABRADOR

SPEAR POINT TO CAMP ISLANDS

INCLUDING

ST LEWIS SOUND AND INLET

SURVEYED BY CAPTAIN H.W. BAYFIELD R.N.

1835.

Additional Soundings by H.M.S. "Albatross" 1867.
H.W.F. & C. 1/10 40" (Telegraph P) Springs rise 3/4 feet Neaps 1/10.

g. gravel, m. mud, r. rock, s. sand, sh. shells, st. stones.

Figures on the land show the heights in feet.

Magnetic Variation in 1863, believed to be stationary.

SOUNDINGS IN FATHOMS.

Wood L. and the adjacent
Shores of the Inlet are
densely covered with Spruce
and Birch. The Granite hills
are from 200 to 600 ft high.

Black Pt. L. is partially wooded
and surrounded with Bushes.

Water to be obtained
First course.

Dark Red
Granite Hills

Water can be
obtained but
is full of weeds.

Current flows mostly from 1 to 2 m.
bringing Icebergs from the North
during the summer which ground
in the banks sometimes to 30 fms.

Caution. As the Channels among the
Islands have been only partially examined
it is not prudent to use them without
a pilot.
